

NCS BIM Task Team Charge – Version 5

Chair: John Tomaszewski

Purpose:

The *NCS Building Information Model Task Team (BIMTT)* will work with the *National Building Information Model Standard™ (NBIMS) Project Committee* to take an appropriate section of the upcoming NBIMS manual and develop appropriate representation and plotting guidelines. Determine what role the *United States National CAD Standard® (NCS)* should play in the process of *Building Information Model (BIM)*. This team will determine whether deficiencies exist in the NCS that are required by people implementing BIM on projects.

Responsibilities:

- A. Liaison with the *buildingSMART alliance™* and the *NBIMS Project Committee* regarding how the NCS fits into the BIM process.
- B. Interview BIM users. Determine what items are missing from the NCS that would be required on BIM projects (e.g., file naming methodologies, additional layers, etc.)
- C. Determine whether those identified elements from responsibility B would be added to the NCS or the NBIMS.
- D. Develop a section or module in the NCS on how NBIMS and NCS interconnect.

Deliverable:

Develop BIM section/module for NCS.
